

### Lab Instructions:

1. Open **Sublime Text** and open up the **index.html** file you created last lab. If you need to finish up lab1, 2, or 3, do so now because you'll need it for this lab!
2. We will be adding a **nav menu** on the top of this page. Do you remember how to do this?
3. First, create a **<div>** that will hold all the nav menu items.
4. In this **<div>**, add **four <a>** tags. Each **<a>** tag will be a menu item.
5. **<a>** tags are links so by default they come with underline and the text color is blue. Overwrite these so that they don't look like a link.
6. Then, using **flexbox** properties that you learned today, make all the nav items be horizontally next to each other. Then horizontally **center** them.
7. For smaller screens, however, let's only show two nav menu items per row. Find where you created a media query for screen sizes 0-768px. In here, add a CSS rule so that all the menu items are stacked **vertically**. Only use the **flexbox** properties to set this.
8. **Hint:** Here is a website that has a good explanation of all the flexbox properties we learned today: <https://css-tricks.com/snippets/css/a-guide-to-flexbox/>.
